Web Neighbour is hiring an AI and Digital Product Developer. This is a remote and project-based opening. The work is for digital products and smart web solutions. The company wants someone who can build useful tools for real business needs.

Work Focus

The selected person will create digital products that go beyond basic websites. The work will include AI tools and client-facing demos. The goal is to help local businesses with smart and useful systems.

- Build digital products and web apps.
- Create AI-driven solutions for clients.
- Develop booking systems and mini-SaaS tools.
- Add WhatsApp bots and smart workflows.
- Build inventory trackers and scheduling engines.
- Showcase your own products as live demos.
- Support the agency sales team with demos.

What They Need

The company wants practical experience. A strong portfolio is important. The candidate should know how to turn ideas into working products.

- Experience in building digital products.
- Full-stack or API integration skills.
- Low-code or no-code product knowledge.
- Custom software development experience.
- Good understanding of AI tools.
- Ability to solve real business problems.
- Portfolio of live products or MVPs.
- Working demo links are useful.

Benefits

This is a flexible remote opportunity. The work is project-based. It can suit someone who likes product building.

- Flexible schedule.
- Remote work.
- Project-based work.
- Commission-based milestone pay.
- Chance to work on AI products.
- Chance to show your own products.

How to Apply

Interested candidates can send their resume and project links by WhatsApp or email. They should mention the role name in the message.
