## BACKEND ENGINEER – DISTRIBUTED SYSTEMS

### JOB LOCATION

? Remote work from: USA

### DESCRIPTION

**Job Title:** Backend Engineer – Distributed Systems

**Company:** Yeah! Global

**Location:** Remote – USA

**Position Type:** Full-Time

#### Job Description

Yeah! Global is seeking a skilled **Backend Engineer** to join our team and build scalable, distributed systems for the next generation of blockchain technology. This role focuses on optimizing performance, enhancing reliability, and delivering cutting-edge infrastructure solutions.

### Responsibilities

- **System Design:** Design and implement highly scalable backend solutions for blockchain applications.
- **Distributed Computing:** Develop robust distributed systems to handle complex blockchain workloads.
- **Performance Optimization:** Improve system throughput and minimize latency.
- **Collaboration:** Partner with cross-functional teams to ensure seamless integration across components.
- **Security Practices:** Implement secure coding standards and address system vulnerabilities.

### HIRING ORGANIZATION

Confidential

### BASE SALARY

INR 27,000 - INR 50,000

### DATE POSTED

? December 20, 2024

### VALID THROUGH

2026-07-13

- **Monitoring & Debugging:** Ensure system reliability through proactive monitoring and debugging tools.

## Candidate Requirements

- **Education:** Bachelor's degree in Computer Science, Software Engineering, or equivalent practical experience.
- **Technical Skills:**
  - Proficiency in programming languages like **Rust**, **Go**, or **Python**.
  - Strong understanding of distributed systems and consensus mechanisms.
  - Familiarity with blockchain technology and cryptographic protocols.
- **Problem-Solving Abilities:** Ability to troubleshoot complex system issues effectively.
- **Team-Oriented:** Excellent communication and collaboration skills.

## Desirable Skills

- Experience with Kubernetes, Docker, and cloud-native technologies.
- Involvement in open-source projects or blockchain communities.
- Knowledge of Byzantine Fault Tolerance (BFT) algorithms.
- Background in research-driven development.
